

frequency conversion UPS(500VA-150KVA)

Special features:

- Adoption advanced PWM the adjustment of the width for the pulse, make it small cubage, light weight, high efficient;
- Input frequency: 50Hz,60Hz or 400Hz;
- No eradiation interruptible with smaller harmonious wave component, don't product interference after special treating
- It's fit to resistance, capacity, inductance, and nonlinear load use of the others .
- It's over current, over high temperature, short cut, cutting off current protection and alarm devices.
- With four figure digits LED expression for voltage, frequency, current KVA rating, it's simple, readability, high analysis.
- We can test for voltage, frequency, current, KVA rating at the same time, but needn't shifting.
- We can provide the standard voltage, frequency, and all kinds electric product of the simulator test of all country in the world.

application areas:

- special laboratory (EMI/EMC)use standard power
- manufacturer (ensure quality/control/test of life) and so on unitary test.
- power of exchange power test
- research dept/power of laboratory (400Hz)
- power for experiment
- All kinds of test of electric goods
- air conditioning/test of compressor
- test of air-conditioning
- test of motor facilities
- photocopier, scanner, test product for QA
- test of monitor
- transformer/TRIAC/SCR and son on test of component
- test of light stabilizer
- communication equipment
- airport equipments
- Military equipment
- space industry, watercraft and equipments for missile facilities.
